## OBJECTIVE

To study the dynamics and cloud morphology on planetary atmospheres.

## EDUCATION

- |             |   |
|-------------|---|
| 2016 - 2021 | <b>Ph.D. in Space Sciences</b><br>Florida Institute of Technology<br>Researching Jovian atmospheric dynamics and moist-convective storm formation             |
| 2012 - 2016 | <b>B.S. Astronomy &amp; Astrophysics</b><br><b>Dual Major in B.S. Mathematical Sciences</b><br>Florida Insititute of Technology<br>Graduated <i>cum laude</i> |

## RESEARCH PROJECTS

- |             |  |
|-------------|--|
| 2016 -      | <b>Studying Jovian atmospheric dynamics and cloud formation using the EPIC atmospheric model</b><br>Current graduate research project. Involved in updating the model with a moist-convective scheme to analyze the effect of convective plumes on cloud morphology and atmospheric structure. Updated model with improved parameterization of cloud sedimentation velocity.   |
| 2019 - 2020 | <b>Fragmentation modelling of the Aug 2019 jovian impact</b><br>Implemented a atmospheric meteor fragmentation model to study the impact on Jupiter to determine the impact geometry and physical parameters. Used the fragmentation model to find the best case scenario for the impactor object based on best fits to the lightcurve.  |
| 2017 - 2019 | <b>Analyzing the trajectory, orbit and material makeup of the meteor over Arizona on June 2nd, 2016</b><br>Used multiple all-sky cameras to triangulate the location of the meteor, and determine its trajectory. A backward integration yielded the orbit of the parent body. Multi-spectral radiometric data was analyzed to determine energy output from the bolide to determine mass and size estimates, and consequently, the physical characteristics of the object. |
| 2017 - 2020 | <b>Studying the Great Dark Spot observed by Voyager 2 on Neptune using atmospheric simulations</b><br>Used the EPIC atmospheric model to simulate the Great Dark Spot observed in 1989 by the Voyager spacecraft. Helped in the analysis of model output.  |

## TEACHING EXPERIENCE

Graduate student assistant at Florida Tech for Physics lab and Observational Astronomy  
Physics lab:

- Teaching experimental aspect of basic physics laws relating to Newtonian dynamics
- Training students in experimental error analysis and process of writing lab reports

Observational astronomy:

- Training students with use of 8" telescopes and the data reduction using a CCD.

## SKILLS

- Proficient in Python, C and C++
- Basic knowledge of FORTRAN and R
- Proficient in using the Ortega 32" telescope at Florida Tech
- Capable of processing images using lucky-imaging technique
- Fluent in English and Tamil. Others (in order of fluency): French, Kannada and Swahili

## AWARDS AND ACHIEVEMENTS

- Recipient of 2019 NASA FINESST award
- Dean's list at Florida Tech - Spring 2013/Fall 2014/Spring 2015/Fall 2015
- Member of Sigma Pi Sigma honor society
- Member of Phi Kappa Phi honor society
